

MUFG Agentic Share Sale Experience

How DemoX converted a constrained request into a client-ready Infinity 26.1 experience

OVERVIEW

Business Problem: MUFG secondary loan sales and syndication distribution requests were processed through labour-intensive, manual email inbox monitoring. This decentralised, high-touch process extended turnaround times, increased operational risk and constrained the ability to scale with market demand.

Project Scope: Showcase intelligent email intake, document extraction, share sale journey via agentic email and chat agent, missing-information handling and controlled compliance review.

Pega Solution: Pega Agentic Email autonomous ingestion converts unstructured email trades into structured, governed enterprise cases with Straight-Through Processing.

Experiential Proof: Through the DemoX collaborative build, MUFG could experience a live Infinity 26.1 Agentic Email environment packaged into an interactive leave-behind web asset, validating immediate business impact and operational time-to-value.

Infinity 26.1

Agentic Email experience

DEMOX DELIVERY

Environment & architecture

- Established a live Infinity 26.1 experience when the existing web shell was on 25.1.
- Reused Blueprint content and configured Agentic Email and required case types.

End-to-end proof

- Converted unstructured email intake into governed Share Sale cases with automated routing.
- Built and tested complete submission, missing-information dialogue and controlled compliance review.
- Supported UI, flow refinement, branding and presentation readiness.

Performance & leave-behind

- Reduced response time from about 10 minutes to about 3 minutes.
- Packaged the experience into an interactive customer landing page and leave-behind web asset.

TEAM CONTRIBUTION

Nishant Patnaik - established the 26.1 environment, imported the Blueprint and configured Agentic Email.

Ramya Vellanki - configured most case design, end-to-end testing and bug fixing.

Ankit Sharma - coordinated stakeholders, provided build guidance, supported branding and daily alignment.

Jensen Lee - joined at short notice and carried significant Agentic Email implementation work.

Pradeep Rukmapuram & Abhishek Anand - tuned agent performance and reduced response time.

Aga Zieba - created the customer-facing landing page and leave-behind.

CLIENT IMPACT

Client presentation outcome

- Senior MUFG business, operations, transformation and AI stakeholders engaged strongly.
- The experience combined email intake, case creation, information follow-up and compliance review.
- Interest focused on handwritten documents, PII handling, Genesys, Investor 360, human oversight, routing and case summaries.
- MUFG requested continued engagement and deeper exploration of the technology.

Broader signal

The experience helped expand the discussion beyond Share Sale toward the wider ETS Lotus Notes estate.

Recognition from the account / SC team

"Great progress over last 24-48 hrs with the build." - Mahesh Swamy; the account team confirmed the build was on the right path.

"Great job, team." - Mahesh Swamy, calling out Jensen Lee, Nishant Patnaik, Ramya Vellanki and Ankit Sharma for "burning the midnight oil" to get the build ready, and thanking the performance-tuning and landing-page contributors.

"As you can tell above, it hit the spot." - Mahesh Swamy, following the MUFG presentation and customer engagement.

Challenges overcome

- Existing web shell was on 25.1 while Agentic Email required 26.1.
 - Experiential asset committed within five business days.
 - Agent responses initially took about 10 minutes.
 - Original three-use-case plan was reduced to two due to time constraints.
 - Delivery required coordination across contributors and time zones.
- Response:** New 26.1 setup, focused scope, expert tuning, testing and rapid cross-team mobilisation.

Executive discussion

- DemoX demonstrated a repeatable model for converting Blueprint output into a customer-ready Agentic Experience at speed.
- Infrastructure, build, AI tuning, branding, stakeholder coordination and presentation preparation operated as one delivery motion.
- Next: formalise tuning guidance, AI design review, landing-page templates and DemoX-to-account-team handover.

Executive takeaway: DemoX delivered MUFG's Infinity 26.1 Agentic Email experience within a compressed timeframe, providing a customer-ready Share Sale solution that demonstrated intelligent intake, document extraction, compliance handling and human-in-the-loop controls. Customer feedback was positive, stakeholders requested deeper technology discussions, and conversations expanded beyond Share Sale into the broader Lotus Notes modernisation opportunity.
